GENERAL SPECIFICATIONS

These safes are rigidly constructed of all steel plate. Outer and inner shell are electrically welded together to provide extra strength.

LOCK mechanism is rigidly constructed for maximum protection. LOCK-Sargent Greenleaf Group Two Combination KEY CHANGE LOCK, protected by a drill resistant steel plate.

All MAJOR record safes are built in strict conformity with the United States Federal Specifications AA-3-81 for a class "350" Insulated safe. Section E-2c of these specifications states, "CLASS 350" safes shall be able to withstand fire test for one hour without attainment of temperature within the safe at any thermocouple location higher than 350° F. (177° C) either during or after the fire exposure.

Add 1½" to depth for handle and ¾" to width for hinges.
